

# BetaFCC Survey Form

[Project Page](#)

## Standard Requirements

You are tasked with creating a survey form for your company/group (create one). Your page should be visually appealing (bootstrap not required however will be graded with that standard)

### ☐ **Form requirements:**

- ☐ Form title that visually is apart of the form using the correct Tag
- ☐ Description for the form using the correct Tag
- ☐ All form elements are contained in a single form tag

### ☐ **Minimum form elements:**

- ☐ Name field
- ☐ Email field
- ☐ Field that accepts only a number
- ☐ One radio buttons field
- ☐ One checkboxes section
- ☐ Dropdown field
- ☐ A text area
- ☐ Submit button

### ☐ **Form validation requirements**

- ☐ Name required
- ☐ Email required and must be valid email account
- ☐ Number field must have a number
- ☐ Number field must deny numbers outside a certain range
- ☐ Radio or checkbox field must have a requirement
- ☐ dropdown , radio and checkbox field must have at least 3 options each

Additional Challenge:

### ☐ **JQuery challenge:**

- ☐ On button submit the page should display a pop up that thanks the user for submitting the form.
- ☐ The popup should also ensure all field elements are reset.

Hacker Challenges

- ☐ Research how to send the answers to a second page and access the answers.

### ☐ **Hacker level 1:**

- ☐ A second page should be displayed.
- ☐ Page should have a visual representation that ties it to the previous page
- ☐ Thank the user for entering the information

- ☐ Make reference to at least 2 of the answers such as using the user's name
- ☐ **Hacker level 2 - extended from level 1:**
  - ☐ Update the page to state that the answers have been recorded.
  - ☐ Record the answers in a text file in CSV Format
  - ☐ The recording system should append any new answers to the end of the CSV file.

Hacker level hint: A useful term is "GET" variables.
